

The following equation in 1 is:

$$(a + b)^2 = a^2 + 2ab + b^2 \tag{1}$$

$$P = S^aDT^{W^b} \tag{2}$$

Chemical formula of Water is :

Water = H<sub>2</sub>O

We can simply write any equation by using the `$_number$` : Sulfuric acid  
= H<sub>2</sub>SO<sub>4</sub>

$$(a + b)^2 = a^2 + 2ab + b^2$$
